

REPORT ON MINI POSTER PRESENTATION ACTIVITY

A **Mini Poster Presentation** activity was conducted for MBA students on **30/04/2026** at the **Department of Health System Management Studies**. The primary objective of this activity was to provide practical exposure to students in collecting, organizing, and presenting **secondary data** in a creative and structured manner.

As part of the activity, students were instructed to select relevant topics and gather secondary data from credible sources such as journals, reports, websites, and published materials. They were then required to convert this information into a **handwritten poster presentation**, ensuring clarity, neatness, and effective visual representation of data.

The posters were displayed on the department notice board, creating an engaging academic environment. The presentation attracted the attention of teachers, students, and research scholars, thereby promoting knowledge sharing and encouraging academic discussions. The use of handwritten posters added a personal and creative touch, reflecting the effort and understanding of each student.

This activity helped students enhance their skills in:

- Data collection from secondary sources
- Data organization and summarization
- Visual presentation and creativity
- Communication of information in a concise manner

Overall, the Mini Poster Presentation was a successful and interactive learning exercise. It not only strengthened students' understanding of secondary data but also fostered creativity, analytical thinking, and presentation skills among the participants.
